## Choose the Best Power Steering Filter for Your Application

### Application:

All power steering equipped vehicles.

### Problem:

Premature power steering failure or increased warranty returns.

### Cause:

Particles were not completely removed during the flushing process or particles from everyday wear of components caused valves to stick and block flow of fluid. Your weapon against contamination is to use one of the in-line filters shown below.

### Solution:

Fight to keep your steering system clean and prevent premature power steering failure by always installing a new CARDONE Power Steering Filter. Part# 20-FLT1 fits all applications and is rated at 200 microns to catch the smallest debris. On applications where space allows, we recommend our new magnetic in-line filter, part#20-FLT2. In addition to a filter membrane, 20-FLT2 utilizes a powerful magnet for maximum effectiveness against ferrous contaminants .

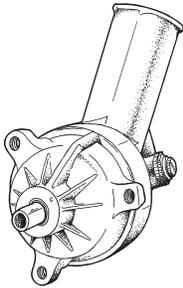

### Note:

- Always use fluid recommended for your vehicle.
- Be sure to flush the power steering system any time a component is replaced. (Refer to PT 20-0012)
- Carefully inspect all hydraulic hoses and replace any that appear damaged. Also, consider replacing hoses on high mileage vehicles or hoses that are more than 5 years old. (Refer to PT 20-0004, 20-0005, PT 20-0016)

## Power Steering Pumps

- Control Valves
- Power Cylinders
- Power Steering Pumps  
-Filters
- Rack & Pinion Units
- Steering Gears

**Cam Rings** - In order to prevent low flow, noise, or no pressure, CARDONE resurfaces the cam ring to give it the original, consistent surface. By running your finger around the inside of the cam ring, you will be able to feel the smooth inner surface. Every unit is tested for proper flow and pressure to make sure it meets all OEM specifications. This process ensures a high quality unit that won't come back.

- Limited lifetime warranty
