

Properly disposing of used oil and oil filters is critical to protecting the environment and is also becoming regulated throughout the country as landfills become overcrowded. Consider recycling your oil and oil filters, it will make a big impact on the environment. For example, recycling just 20% of all oil and oil filters used annually in the U.S. could reap big results, including:

- Nearly 400,000 cubic yards (over 300,000 cubic meters) of landfill space saved
 - Millions of gallons of oil kept from being dumped into landfills
 - More than 34,000 tons (over 30,000 metric tons) of filter scrap recycled to produce steel products
-
