

## Product Updates in Cartridge Oil Filters

The following oil filter part numbers will be changing in appearance due to some product design updates:

51370, 57213, 57214, 57215, 57311, 57526, and 57674

All filters are being updated with construction updates including higher strength end caps, center tubes; along with a switch to higher strength nitrile rubber seals.

The 51370, 57213, 57214, 57215, and 57311 use a design that incorporates skirted endcaps and a free floating bypass valve that uses the O.E. spring load in the housing standpipe.

Updated design sealing example

Updated skirted endcaps

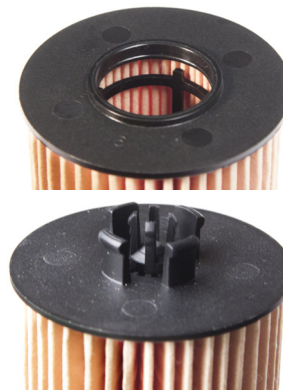

Updated Nitrile sealing

The 57526 and 57674 feature updates including the flat end caps, updated center tubes, and integral seals.

The most notable change is the uses of the O.E. spring load housing standpipe to close and load a newly designed valve plug that snaps into the top end cap.
